Introduction

The **k3lanswerinfoconfig** is a utility for modifying the parameters of remote sensing service KHOMP boards that support this feature, including settings for the detection of mailbox, answering machine, among others.

The behavior of all types of plates KHOMP is identical with regard to CTBus settings, except for boards that have no connection with the bus CTBus.

Parameters

The following parameters are accepted by the program:

- **--help**: Display program information, listing dispoíveis also the parameters for the command line.
- **--version**: Displays the program version.
